

The course pensum will be comprised of selected articles from the scientific literature, and will be listed and updated throughout the course. In addition, readings may be drawn from chapters from the following books:

Lasker, R. (1981) *Marine Fish Larvae: Morphology, Ecology, and Relation to Fisheries*. Washington Sea Grant Program, University of Washington Press. Seattle, Washington. (Copy available at course leaders).

Chambers, R.C. & Trippel, E.A. (eds) (1997) *Early Life History and Recruitment in Fish Populations*, Vol 21. Chapman & Hall, London

Fuiman, L.A. & Werner, R.G. (eds) (2002) *Fishery Science. The unique contributions of early life stages*. Blackwell Science Ltd., Oxford

Miller, B.S. & Kendall, A.W.J. (2009) *Early life history of marine fishes*. University of California Press, Berkeley

These books are not required reading, but they are the best available larval fish ecology texts, and any one of them would be useful for a more complete treatment of fish larvae
