

Reading list for GEOV219 in Spring 2013 (Pensum i GEOV219 vår 2013):

In this course Matlab will be used extensively. Therefore we strongly recommend that you buy the **student edition of Matlab** (www.mathworks.com), which costs about 600 NOK/\$100/75 euros.

It is also recommended that you buy the book **Matlab demystified** (about 90 NOK) by D. McMahon (McGraw Hill, 2007). We will use material from chapter 7 of this book.

Other course material, the exercises and papers for the project, will be given out during the semester.

If you have a laptop you can also bring this to the class.

Please let us know if you have questions about the reading list or the course in general (henk.keers@geo.uib.no; stephane.rondenay@geo.uib.no).
