the course was mostly self-taught and generally very little feedback was given by the teachers. Since there is no prerequisite for this course, I think basic lectures on statistics would've been nice as a small introduction instead of just being presented to various assignments without any preparation.

Overall, I liked the course. Due to the assessed exercise, we were more serious in the classes. Moreover, the teachers and the TA were also supportive and helpful. Thanks for offering such a nice course!

Nei

Kunne ønsket noen korte forelesninger om hva vi skal gjøre. Synes notebook'ene vi fikk utdelt ikke alltid var til hjelp.

I think it is a bad solution to let other "peers" give feedback on our hand-ins when they do not even understand the tasks themselves? It is obviously no help in bad feedback??

Generelt et veldig bra kurs! Ingenting å klage på. XXX og XXX har vært en uslåelig duo!

Although I understand that as a student you will not only learn from the received peer-feedback, but also from giving feedback, for me personally I spent quite a bit of time reviewing, receiving little to nothing in return to work on. I do not think this is because I did the exercises perfect, so I would have preferred to also get feedback from the teachers at least on one occasion in the course. Other than that, I really appreciated the independent nature of the course and the possibility to work on your own project.
