

Emnerapport

BMED340B - emnerapport 2011 autumn

Emneansvarlig: Associate Professor Margaret Veruki

Innledning

The course was completed without problems. The course is a series of lectures followed by laboratory demonstrations.

Oppfølging av eventuelle tidligere evalueringer

Based on evaluation from previous years, students were given more time between lectures of a given method and demonstration of that method, when possible.

Faglærers vurdering av Undervisnings- og vurderingsformer

Pensum

The pensum is large and consists of review articles, research papers and lecture handouts all posted on Mi Side. The student is expected to read these.

Studentstatistikk

Seven students registered and completed the course.

Final grades for the course were:

1 A, 3 B, 3 C (there were no failures)

Evaluation was based on an oral presentation by the student followed by questions related to topics taught.

Studentevalueringer

Students were presented with a survey on Mi Side. There was one response which found the amount of work suitable and the presentations useful, the pedagogic level high and the academic content to be average. The amount of work was judged to be average. The laboratory courses were well-organized.

Faglærers samlede vurderinger, med eventuelle forslag til endringer

Overall assessment: The course is taught over a relatively short time and is taught at the Master's level. It is therefore important that only those students that have the appropriate background courses in Neuroscience or Physiology be admitted to the course.
