

# MOL203 Genstruktur og funksjon emneevaluering høst 2013

## Strykprosent og frafall

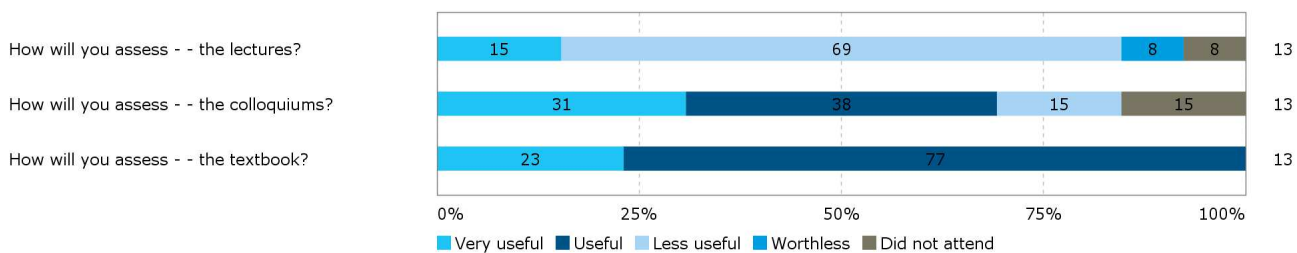

|                               |                                     |
|-------------------------------|-------------------------------------|
| Oppmeldt                      | 48                                  |
| Møtt                          | 41                                  |
| Bestått                       | 31                                  |
| Stryk                         | 10                                  |
| Strykprosent                  | 21 %                                |
| Studiepoengproduksjon:        | 310                                 |
| Karakterfordeling             | A: 6, B: 5, C: 7, D: 9, E: 4, F: 10 |
| Gjennomsnittskarakter:        | C                                   |
| Svarprosent på emneevaluering | 27 %                                |

Alle som svarte på undersøkelsen var i sitt sjette semester. 12 studenter var bachelorstudenter, og én masterstudent. Alle respondenter mente de hadde den nødvendige bakgrunnen.

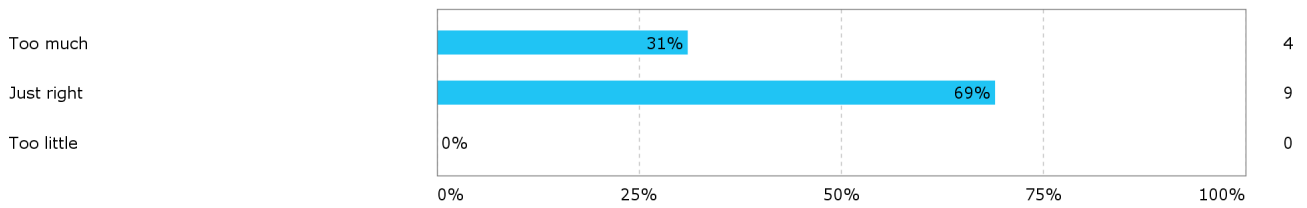

## Om forberedelser til undervisning

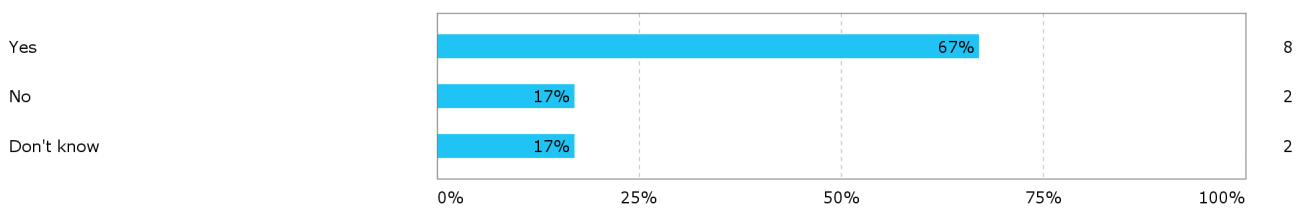

## Om undervisningen

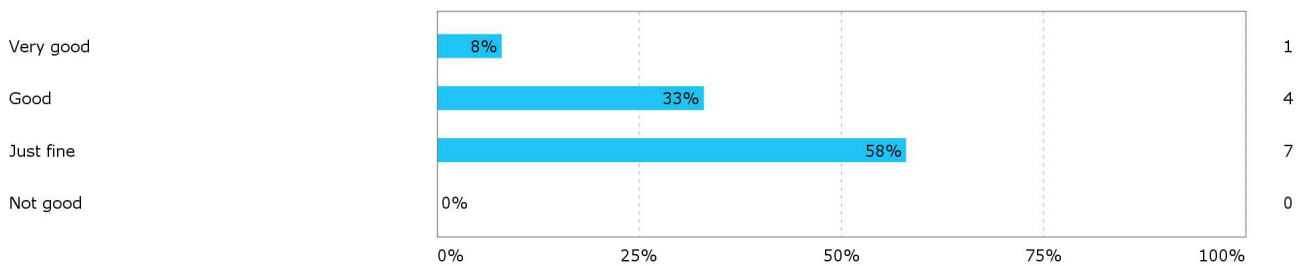

## How would you consider the work load?

## Did the course correspond to your expectations?

## How would you characterize the course all together?

## Any comments on the course all together?

- The lectures lack some enthusiasm and it get very boring easily because the lecturer mostly just read of the power point slides.  
I like Rune, and he is very easy to ask questions to, but I wish the lectures were more fun!
- Too few and too dull lectures. Each lecture tried to cover way too much of the curriculum.
- The course was better than I expected, with it could see a more integrated view of different techniques and I'm sure it will help me later when I'll be on my PhD.
