

## **MUTP101 emneevaluering V2013**

### *Innledning*

The course was delivered by the same three professors/lecturers for the third time in succession and because of this is reaching a good level of maturity in terms of balance, variety and depth. This year, attention has been paid to creating clear links between the theoretical and practical elements of the course. There remains a need for more optimal teaching and learning space.

### *Faglærers vurdering av:*

Undervisnings- og vurderingsformer: The teaching formats have performed well.

Pensum: The literature has worked very well this year without accessibility issues or delays in access.

### *Studentstatistikk*

Available on request from the administration.

### *Rammevilkår*

Lokale og undervisningsutstyr: Although the use of the rooms in the Kulturskole are acceptable, it would be a great improvement if a designated teaching space for music therapy could be found. This would save much effort and worry about physical and technical issues that can appear at any time during the semester with the current solution.

Andre forhold: n/a

### *Studentevalueringer*

Metode – gjennomføring: muntlig og skriftlig evaluering ble gjennomført

Studentenes vurderinger og tilbakemeldinger: informasjon gjøres tilgjengelig på MiSide

Faglærers kommentar: The course is developing well and changes in relation to the structure of the lectures and practical sessions have resulted in a clearer and more logical content organization over the whole semester.

### *Andre merknader (for eksempel undervegstiltak)*

Faglærers samlede vurderinger, med eventuelle forslag til endringer: This course is very important in its role in preparing the students well for future academic work in general and also in creating a good fundamental understanding of basic concepts in music therapy. Now the course is functioning well, it will be the next step to re-assess and ensure the ways in which this course is integrated with the courses in psychology and also with the subsequent courses in the music therapy.
