

Har du graden kurset bygger på?

Do you have the degree this course is based upon?

Kva emner tek du parallelt med GEO310?

Which courses do you follow parallel to GEO310?

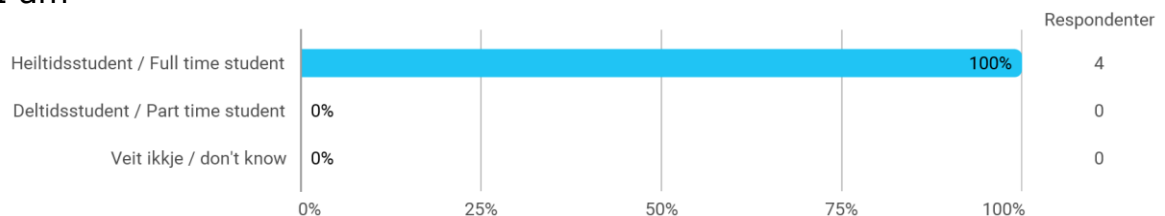

- GEO326 og GEO330
- GEO330, GEO331
- GEO326
GEO330
- GEO230, ENERGI200

Korleis har desse emna fungert saman, fagleg og praktisk?

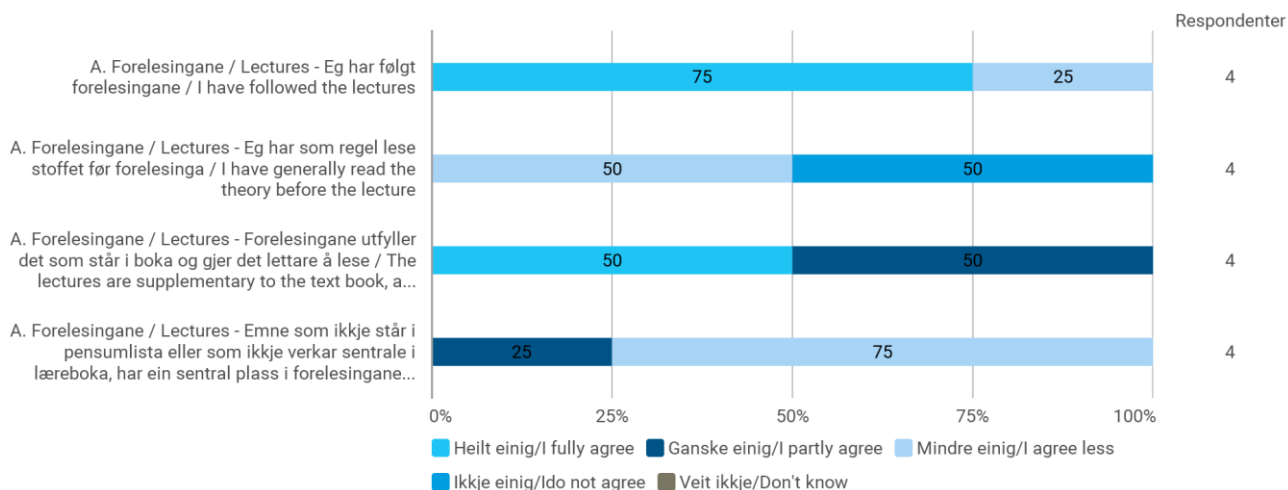

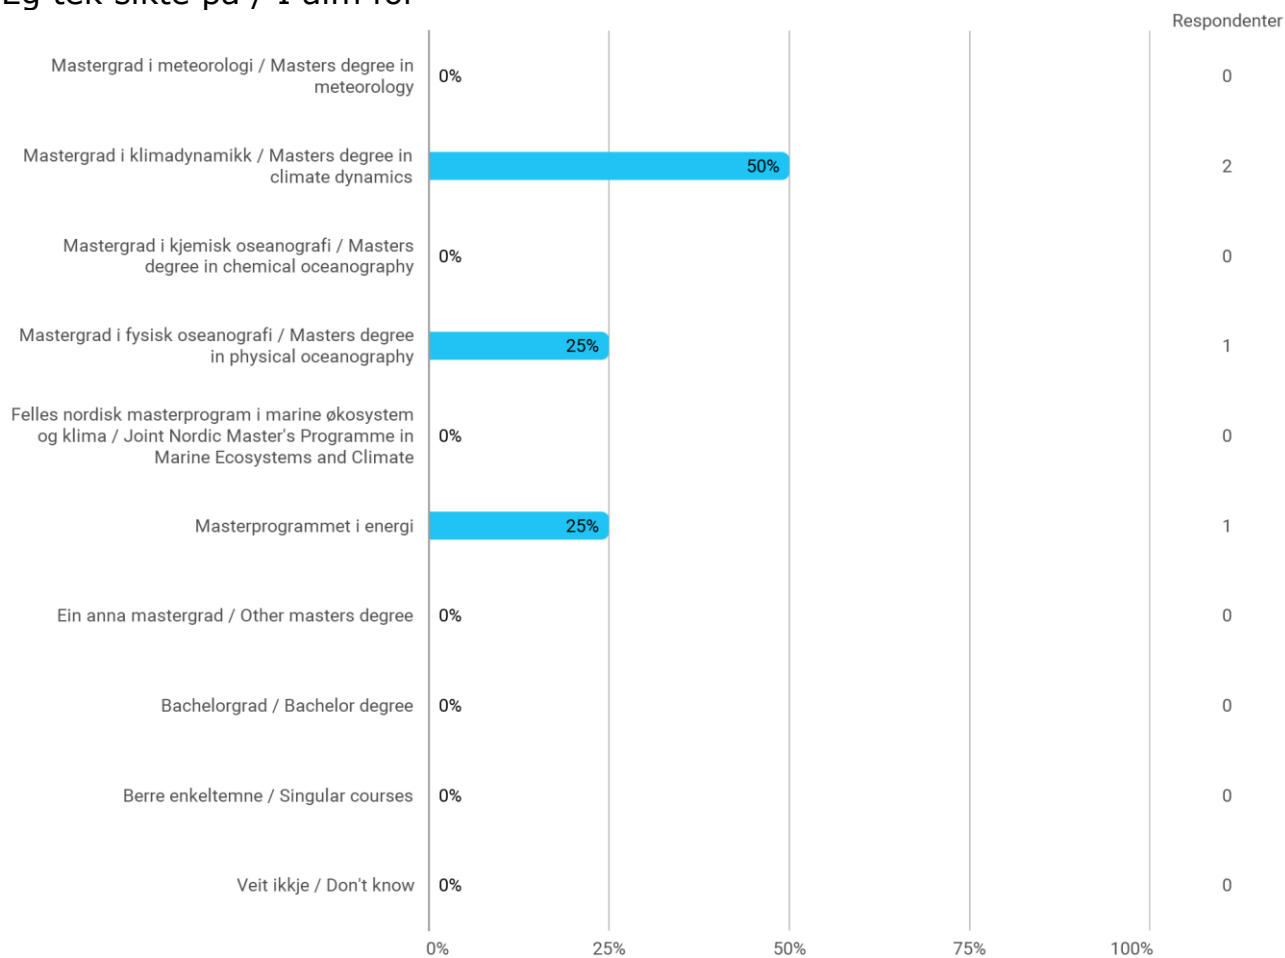

How has these courses worked together, professional and practical?

- Ok, ikke særlig overlapp, stort pensum i alle fagene så mye å gjøre
- Bra
- The content of GEO310 was very different to the content of the other courses. From the schedule it fit together very well, but the workload was a bit much. But it is okay, since I didn't have to take all the three courses.
- Geof fagene har fungert bra sammen, der 230 nevner turbulens har jeg fått det mer utfyllende i 310.

Eg er / I am

Eg tek sikte på / I aim for

Additional comments regarding the lectures:

Utfyllande kommentarar til forelesar og seminarleiar:

Additional comments on the lecturer and group leader:

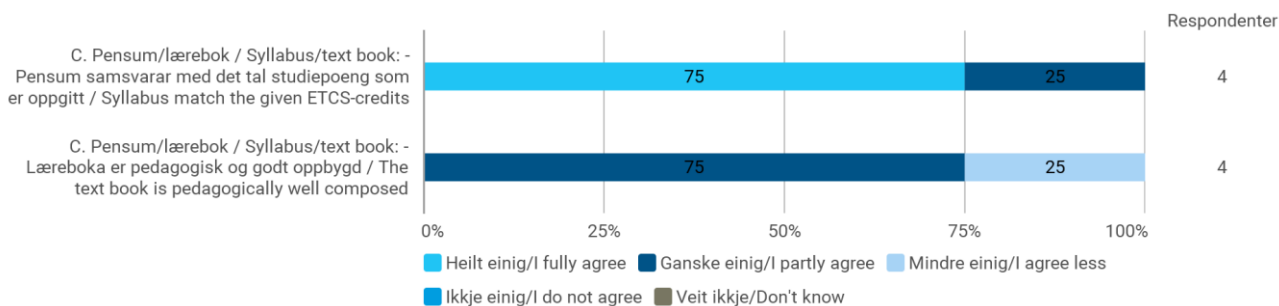

- Turbulens i atm: Foreleserer bruker power point slides, og gå dermed altfor raskt gjennom stoffet, får bare noe ut av forelesningene dersom en er godt forberedt på forhånd, noe det ikke alltid er tid til.

Turbulens i havet: Veldig bra forelesninger! Underviser på tavle, så lettere å følge med. God forklaring på figurer og illustrasjoner.

- It is difficult to judge those things here, since the course is split up and we had two different lecturers.

I didn't attend the exercises of the oceanography part of the lecture, so I can only tell about the meteorology group leader.

- For mye informasjon på forelesningsnotatene som blir presentert i atmosfæredelen. Det går fort og er vanskelig å få med seg alt. Burde brukt tavle mer.

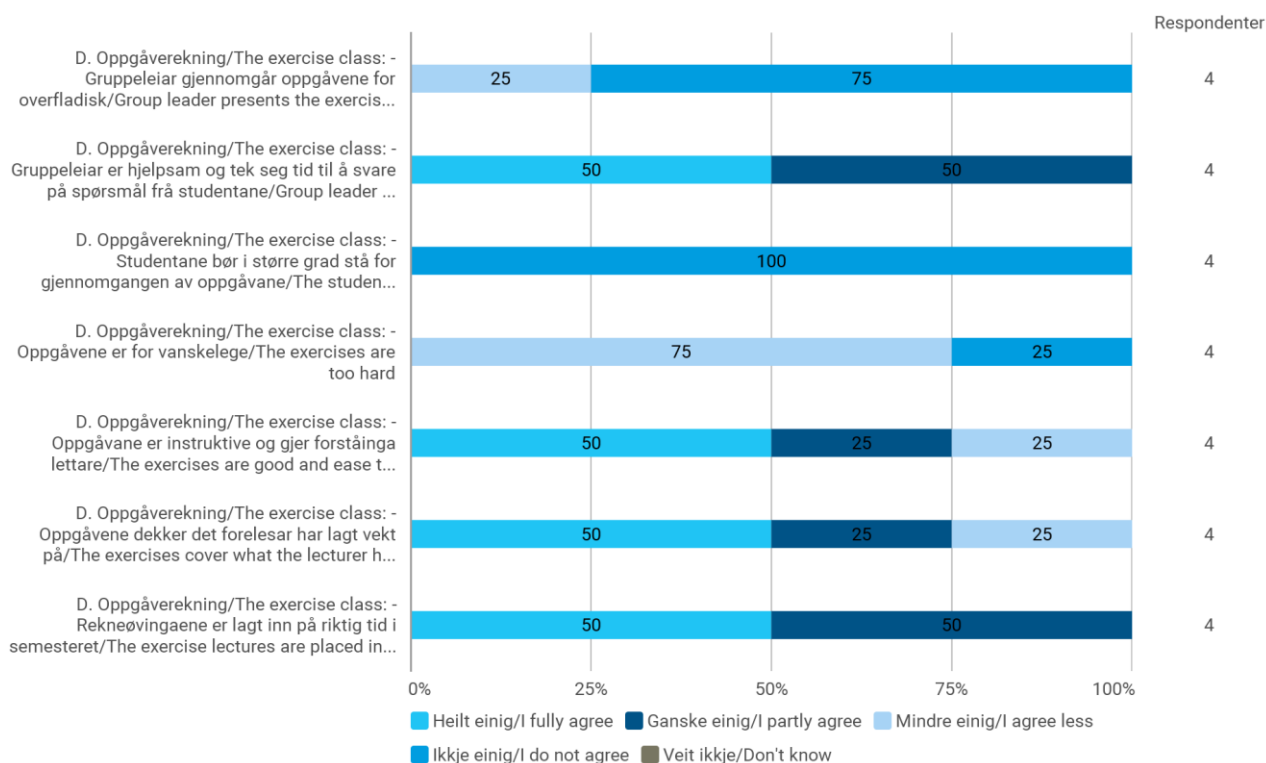

Sakna du nokre forkunnskapar?

Did you miss any background knowledge?

- nei
- i don't think so
- Matlab

Additional comments on the syllabus/text book:

Utfyllande kommentarar om oppgåverekninga: Additional comments on the exercise class:

- Bra

E. Emnet som heilskap / The course as a whole: - Emnet har bidrege til å auke interessa for faget/The course has contributed to increase my interest for the subject

Utfyllande kommentarar om emnet som heilskap: Additional comments on the course as a whole:

- In my opinion there was too much rushing through the formulas in the meteorology part. I think it would be more helpful to not show every single equation, but explain them. It doesn't help to have seen them, but haven't understood any of the formulas.

Samlet status
