

LING306 HT 2020

This year has been different. Normally the students plan, design and carry out an experiment that is analyzed in collaboration with the lecturer. This year it has been impossible to access the lab and to recruit research subjects. We have adapted the course demands such that the focus is on planning a realistic experiment. Students may choose to independently sample some data if special equipment is not needed.

The hybrid solution of a mix of lectures and zoom lectures may have been less than optimal. However, we have compensated by having more extended supervision and feedback on the reports. Most students have been active in discussions. We got positive reviews of the course and the personal supervision.

Six out of eight students have submitted exam papers. Two students did not fulfill the obligatory requirements.
